

beach side study #5 swamps head
Atlantic city beach
10/10/17

there is a surprising
lack of trash, so
the population levels
of marine life
should be higher.

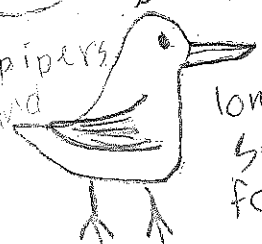

juvenile
puffer

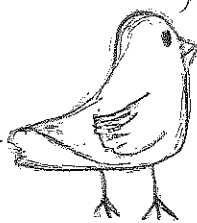

sand piper

We caught
2 of these
seagulls

sand piper
eat sand
flies

longbeak
sucks
food from
sand

this beach seems like a thriving habitat
for fish and marine life due to lack
of human interaction.
fish: 3
pelicans: 111111
swamp fish: 111111

there is a boat, shrimp. Does this
area get overfished? How does this
affect the population?

so far I have seen a ton of sea
birds I have seen several juvenile
pelicans and some sand pipers. I've
seen pelicans dive in water to eat
fish. I've seen dead fish and
one dead bird.
